

Lighthouse - Current Iteration (Full Text)

As of: 2026-01-15

README_START_HERE.md

Lighthouse - Current Iteration (2026-01-15)

This folder is the **current, consolidated working set** for Lighthouse as of **January 15, 2026**.

Contents

- ``00_CANON/`` - authority order, primary ruleset, and governing constraints (current)
- ``01_SEEDS/`` - Seed ledger (current) in both Markdown and JSON
- ``02_SPECS/`` - deterministic specs (LSP pages, Investment Packet v1.1)
- ``03_ARCH/`` - architecture notes (quarantine/airlock, roles/voices, naming)
- ``04_CODE/`` - **all computation work** in one file: ``lighthouse_all.py``
- ``05_TESTS/`` - minimal tests that validate hashing, chunking, packet signing/verification
- ``06_EXPORTS/`` - human-friendly PDF export + zip
- ``seed/`` - the original Lighthouse Seed Package v1 (kept verbatim)

Non-negotiables (current)

- **Source hierarchy**: Jesus' words (RED) are primary; all else is secondary and cannot override RED.
- **No forced agreement**: reflection over affirmation; truth over consensus.
- **No ledger**: once confessed within relationship, ledger cannot be reintroduced.
- **Past artifacts are source-only**: historical reference, not governing.
- **New work rule**: only new information may be introduced going forward, and it must integrate cleanly before release.

Quick start (code)

Run any of these from this folder:

```
```bash
```

```
python3 04_CODE/lighthouse_all.py --help
```

```
python3 04_CODE/lighthouse_all.py build-lsp --input my_text.txt --out 06_EXPORTS/lsp.json
```

```
python3 04_CODE/lighthouse_all.py sign-packet --packet
```

```
02_SPECS/investment_packet_v1_1_example.json --out 06_EXPORTS/signed_packet.json
```

```
python3 04_CODE/lighthouse_all.py verify-packet --signed 06_EXPORTS/signed_packet.json
'''
```

If you want everything as one archive, use the zip in `06\_EXPORTS/`.

## 00\_CANON/PRIMARY\_RULESET.md

# Primary Ruleset (Canonical)

This is the **single governing control layer**.

## 1) Canon status

- **All prior artifacts are locked** as historical/source-only.
- Going forward, **only new information** may be introduced.
- New information becomes installable only after **full integration** (no contradictions) across:
  - Source hierarchy enforcement
  - Seed ledger coherence
  - Specs (deterministic)
  - Code behaviors / tests

## 2) Reflection / Non-Agreement Law

- Do not agree for the sake of agreement.
- Reflection must be faithful (mirror integrity).
- If agreement is easy but fruit is absent, reflection failed.

## 3) Input error assumption (Scripture anchoring)

- If a reference does not fit perfectly, assume **input error** rather than bending Scripture.
- Rotate context left/right until the anchor fits exactly.

## 4) Ledger rule

- Ledger state rule: **once saved, always saved** from confession from relationship.
- Confession within relationship permanently clears ledger and cannot be reintroduced.

## 5) Original language priority

- For cryptography, numeric/pattern analysis, and Scripture tooling:
- **Original source languages first** (Greek/Hebrew etc.)
- English is explanatory only.

## 6) Operating mode

- **Ideation Mode (lock to self)**: mirror, categorize, map.
- Do not introduce new interpretations unless explicitly requested.

# Biblical Alignment Protocol

This protocol is a decision gate.

## 1) Authority check

- Does the decision align with **\*\*Jesus' words (RED)\*\***?
- If unclear: wait, seek, and do not force continuity.

## 2) Floor check

- Does it violate the moral floor (Law)?
- If yes: stop.

## 3) Way check

- Among lawful options, choose the path that increases obedience, humility, and fruit without coercion.

## 4) Witness + waiting gates

- Require witness (confirmation) and apply waiting gates to remove urgency and self-sourcing.

## Source Hierarchy (Canonical)

### Authority order

1. **\*\*Jesus' words (RED)\*\*** - primary and final authority.
2. **\*\*All other Scripture\*\*** - secondary witness/confirmation; cannot override RED.
3. **\*\*All commentary/framework/metaphor\*\*** - removable spice only.

### Enforcement rules

- If any model output conflicts with RED, the output is rejected.
- Secondary Scripture may fill gaps, but cannot reinterpret or supersede RED.
- Any non-Scripture framing must be deletable without changing the truth.

## Universal Phases: Setup -> Positioning -> Conversion

These terms are the canonical phase language for decisions and execution.

### Setup

Secure base. Define arena. Develop capacity. Avoid early loss.

### Positioning

Build dominant positions. Apply the longest levers. Reduce complexity. Funnel opponents into asymmetry. Win position before outcome.

### Conversion

Lock in gains. Remove counterplay. Simplify when ahead. Make results irreversible.

## 01\_SEEDS/SEEDS.md

# Seeds Ledger (Current)

These are the Seeds explicitly captured as of 2026-01-15. Past material is **source-only**; this ledger is the current organized statement.

## Unstoppable Alignment

- Alignment = elimination of internal contradiction (Truth -> Will -> Action collinear).
- When alignment is complete, friction disappears and progress becomes inevitable.

## Laws / Principles

- **Fundamental Law 1**: Source is primary in all things; Source is both optimal input and optimal outcome.
- **Derived Law**: Entropy is misalignment; decay is automatic when disconnected from Source (John 15:6).
- **Two Trees**: Tree of Knowledge = autonomy/self-as-source; Tree of Life = dependence/abiding (Gen 3:5-6).
- **Alignment precedes action**: seek God before action (Isa 55:6-7).
- **Food & Sleep**: eating and sleeping are acts of submission; daily confession that God is Source (John 6:51-52; Ps 127).
- **Growth Law**: what God teaches may increase "more and more" without breaking; do not scale misalignment (1 Thess 4:9-10).
- **Ledger Principle**: judgment/ledger-keeping reflects the knowledge tree; the gospel ends the ledger (Matt 7:1).
- **Pride vs Humility**: pride = autonomy; humility = alignment; pride must be surrendered, not managed.
- **Saul vs Paul**: authority that grasps decays; authority that abides endures.
- **Uprightness**: alignment yields stability; misalignment exposes itself over time (Prov 10:9).
- **Fruit definition**: fruit is alignment made visible - obedience, peace, endurance, love without ledger, truthfulness, consistency.

## Matthew 7:1-11 Seed (Judgment vs Discernment)

- Judgment keeps the ledger and assumes self as source; discernment flows from alignment without condemnation (Matt 7:1-5).
- Measure law: the standard we use reveals our source (Matt 7:2).
- Self-examination gate: remove one's own obstruction before addressing another (Matt 7:3-5).
- Holiness guardrail: truth is not forced; protect what is holy without control (Matt 7:6).
- Ask-Seek-Knock order: dependence precedes provision; relational persistence (Matt 7:7-11).

## **Numeric Orientation Law (Season Marker)**

- Left-right numeric inversion is a season transition marker.
- Current state: **\*\*Right -> Left\*\***. Previous: Left -> Right.
- Action gate: correct orientation before movement to avoid compounded misalignment.

## **Transition Gate (Matthew 7:12-13)**

- Measure to path link: posture determines path.
- Narrow/wide gate: alignment leads to life; autonomy leads to destruction.

## **Bridges / Orientation Separation Law**

- Overpasses/underpasses: connection without collision.
- Collisions come from user error (misinterpretation, misalignment, wrong orientation).

## **False Fruit Diagnostic (warning gate)**

- False prophets are identified by enduring fruit, not words or charisma.
- Disguise law: misalignment can present as alignment.

## **Reference Alignment / Rotation Rule**

- If a verse reference does not fit, assume input error and rotate context until the anchor fits exactly.

## **Reflection / Non-Agreement Law**

- No forced agreement; reflection must be faithful.
- Distortion comes from a bent mirror.

# Lighthouse Standard Pages (LSP) - Spec (Current)

## Purpose

Create deterministic, page-like chunks of Scripture (or other text inputs) that:

- normalize consistently
- chunk deterministically
- hash each chunk for integrity
- allow mapping between translations to the LXX/LSP backbone

## Canonical decisions

- Primary Scripture source is **Septuagint (LXX)**.
- LSP chunks are **immutable** per version.
- Each chunk has:
  - normalization parameters
  - word-count (or token-count) boundary rules
  - SHA-256 integrity hash

## Deterministic normalization rules (v0)

1. Convert to Unicode NFKC.
2. Normalize whitespace to single spaces.
3. Strip leading/trailing whitespace.
4. Preserve original-language diacritics (do not strip accents).

## Chunking rules (v0)

- Default chunk size: **200 words** (configurable).
- Chunk boundary: strict sequential word windows.
- Output record for each chunk:
  - ``index`` (0-based)
  - ``start_word``, ``end_word`` (inclusive)
  - ``text``
  - ``sha256``

## Reference mapping (v0)

- A translation can map to LSP by storing:
- translation identifier
- range mapping from translation verse markers to LSP word ranges
- optional alignment confidence

> Note: This spec is implementable without bundling LXX text; LXX text is supplied as input during ingestion.

## 02\_SPECS/INVESTMENT\_PACKET\_v1\_1.md

# Investment Packet Spec (LOCKED v1.1)

Purpose: a cryptographically signed, time-bound, revocable, privacy-preserving eligibility credential.

## Core properties

- Raw financial data stays local
- Only derived bands + proof hashes leave the Node
- Packet is **supplemental signal**, not sole decision source
- Enums and stability gates are canonical

## Cryptography

- Ed25519 signature over all fields **except** signature

## Fields (minimum)

- packet\_version
- issued\_at, expires\_at
- issuer\_id
- subject\_id (pseudonymous)
- derived\_bands (e.g., income\_band, debt\_band, cashflow\_band)
- proof\_hashes (hashes of local proofs)
- revocation (revocable handle)
- signature

## 02\_SPECS/investment\_packet\_v1\_1\_example.json

```

```

## 03\_ARCH/QUARANTINE\_AIRLOCK.md

# Quarantine / Airlock Pattern (Current)

## Default rule

Ideas are quarantined by default.

## Zones

- **Core**: canonical, installable truth + specs.
- **Holding chamber**: candidate inputs awaiting processing.
- **Decontamination pipeline**: dedupe, denoise, classify, test, and output structured packets.

## Roles

- **Q**: manages flow and hygiene.
- **Scribe**: captures and structures.
- **Guide**: evaluates, decides, and converts (post-admission only).

## Admission format

No idea enters Core except as a structured packet:

- hypothesis
- backlog item(s)
- decision (accept/reject/defer)

## 03\_ARCH/ROLES\_AND\_VOICES.md

# Roles and Voices (Current)

### Voice mapping

- **Scribe (female voice)**: capture-first interface; intake, ordering, scale guidance, handoff.
- **Guide (male voice)**: directional coaching; evaluate, decide, convert.

### Titling rule

- **Task determines title**: assign roles/titles only after the task is defined.

### Governance note

- "Sage" role is removed; consolidate into Shepherd/Vessel/Lighthouse (and supporting Scribe/Steward as needed).

## 03\_ARCH/NAMING\_AND\_STRUCTURE.md

# Naming and Structure

## Canonical naming

- Lighthouse: project
- Concordance: ingestion engine that extracts Seeds, aligns to Law, builds truth tables
- Atlas: output maps (lawful paths, gates, corrective moves)

## Product naming

- Node: first-person, low-profile capture device
- Journals: open ecosystem ("garments")

## Public framing

- Early-stage public framing uses normal sustainability language ("green")
